

ICI ON RECYCLE (Here we recycle)

Everyone is a winner!

Like any efficient management, that of residual materials brings tangible benefits on several levels, including economic environmental and social. Aside from being profitable, many of the actions to reduce, reuse and recycle are easy to perform.

RECYC-QUÉBEC offers a recognition program tailored specifically for industries, commercial establishments and institutions that wish to move towards sustainable development.

The responsible management of residual materials is an integral part of a strategic approach to the management of the environment and is well appreciated by the general public; let your establishment take advantage of that sentiment. The ICI ON RECYCLE program and its certification process will place your establishment in the limelight at a special ceremony. The certification also allows the recipients to use the graphics and signature of the ICI ON RECYCLE program and to be a part of the communications network of RECYC-QUÉBEC that includes a Web site and the publication of frequent communiqués.

A first step to sustainable development!

The efficient management of residual materials, from source reduction and re-use, to recycling and valorization contribute to the conservation of natural resources and the reduction of energy usage and production of green house gases.

Economical Gains

- Savings can be realized on the purchase of supplies and various items (reduced consumption of paper, selection of more durable products, use of recycled printer cartridges etc.)
- Increases in the amount of recuperated materials and increased revenues from the sale of recycled resources through more efficient recycling at the source.
- Reduction of transportation costs and total tipping fees
- Improved image on the international level through the official support of the government.

Environmental Gains

- Conservation of natural resources and reduction of total energy costs
- Reduction of the pollution caused by eliminating residual materials
- Reduction in the emissions of green house gases to the atmosphere

Social Gains

- Mobilization of the leadership and employees around a responsible environmental action
- Recognition of the ability of the personnel of the establishment to care for the environment at work.
- Meshing with other environmental programs, at home and at work, reinforcing the environmental commitment of individuals.

RECYCLING, IT PAYS!
